User fees EEG/ERP

Lund University Humanities Lab is a university-wide research infrastructure at the Joint Faculties of Humanities and Theology.

The Humanities Lab facilities includes equipment for measuring the electrical activity of the cerebral cortex through electrodes attached to the scalp (Electroencephalography, EEG). In the Lab we use either electrode caps or sensor nets placed on the skull. Conductive gel or electrolytic water is then applied to the electrodes.

The Humanities Lab need to charge a fee to its users to finance the necessary material purchases of new electrodes, caps / mesh and conductive gel, as the use and wear on these consumables is significant.

This cost is set at SEK 250 per experimental participant. The project manager is responsible for documenting the number of participants and notifying the Humanities Lab's administrative coordinator of this together with invoicing information.

The cost applies to all users regardless of faculty.

This decision has been made by the Humanities Lab Steering Committee after presentation by administrative coordinator Maja Petersson.
